

Vin = 0.2V AC peak to peak

| Frequency (HZ) | Current (mA) |
|----------------|--------------|
| 1000           | 1.95         |
| 5000           | 1.95         |
| 10000          | 1.95         |

Table 1. Frequency vs Current with 10k load

| Load  | Current |
|-------|---------|
| 9973  | 1.95 mA |
| 15146 | 1.91 mA |
| 21894 | 1.87 mA |

Table 2. Load vs Current with 1KHz Vin

| Shape    | Current mA |
|----------|------------|
| Sin      | 1.95       |
| Square   | 1.95       |
| Triangle | 1.95       |

Table 3. Input shape vs Current with 1KHZ and 10K Load

### Conclusions

Max Current Draw Across all tests: 0.009 AMPS (9mA)

Current source is accurate across tests, stays consistent between load, frequency, and shape.

Small deviations are due to unideal parts with normal tolerances.
